

Client:
City of Chino Hills

Completion Date:
Estimated February 2009

Total Dollar Value:
\$ 650,000

Project Description:
A/V Integration

Digital Networks Group provided all the Audio Visual integration services for the new City of Chino Hills Government Center which included a new City Hall, Police Department, Fire Department and Library.

“ As System Integrators Digital Networks has the experience of integrating audio visual products with products in the IT world, which made it less of a challenge to integrate a new voting system in the main council chambers”, states David Suter, Account Executive at Digital Networks Group, Inc.

In the Council Chambers a large rear projection system was integrated with a Crestron control system and voting package. Council members are able to vote via LCD touch screens and have voting results displayed in real time. Audio for Council Chambers meetings is processed through a Biamp Audia Digital signal processor and provides audio playback for the in room speakers, the broadcast system and in house press feeds.

The Fire Administration Boardroom also features a Crestron Control system and Biamp Audio processing. Additionally, the boardroom has the ability to digitally record audio and video from all meeting for streaming and archiving.

Digital Networks Group also integrated over 20 conference and meeting spaces throughout the government center.
